Here-and-Now Awareness - Clinician dialogue

Guide a collaborative conversation about here-and-now awareness while checking fit and participant choice.

Mental health professionals | 15 minutes

Fictional example: Rae notices the clock and thinks the session is almost over.

Invite and obtain permission

Offer: "Would it be useful to explore here-and-now awareness using an ordinary or fictional example? We can adapt it, observe, or stop." Ask what the person wants from the conversation.

Elicit before teaching

Ask: "How does this show up, if at all, in your own words?" Offer this idea tentatively: Notice current experience before explaining it. Ask what fits and what does not.

Guide the task

Describe three details in the room, one thought, and an optional feeling without deciding what they mean. Ask for permission before giving an example. Use this fictional illustration if useful: Rae notices the clock and thinks the session is almost over.

Reflect and check accuracy

Reflect only what was offered: "I heard you describe ___. What did I miss?" Ask: Which observation feels most useful to stay with briefly? Avoid assigning motives or interpreting silence as agreement.

Respond to a mismatch

If the person rejects the frame, say: "Thank you for correcting it. What would be more useful?" Return to their language or choose a different approach.

Close with agency

Ask which observation, question, or support request the person wants to keep. Confirm a manageable ending and appropriate follow-up; do not turn a tentative possibility into a homework obligation.

Reflection

What would tell me to adapt, stop, or seek supervision?

Scope and adaptation

Keep experiments collaborative and low intensity. Chair-based or unfinished-business exploration belongs with appropriately trained clinicians after assessment, with a stop cue and an observing alternative. Do not interpret symbols, recover memories, force body focus, or use cathartic confrontation.
