Protective Moves with Context - Session activity

Facilitate a structured practice of protective moves with context with preparation, reflection, and an agreed closing.

Mental health professionals | 30 minutes

Fictional example: Sam goes quiet to avoid arguing, while Alex experiences the silence as distance.

0-5 min | Agree on purpose and fit

Explain the educational scope. Ask what would be useful, check readiness and access needs, and establish choices to observe, adapt, or pass. Use an ordinary example; do not solicit trauma narratives.

5-10 min | Orient with an example

Protection can be understood while harmful behavior remains accountable. Fictional example: Sam goes quiet to avoid arguing, while Alex experiences the silence as distance. Ask what is observed and what remains uncertain.

10-20 min | Practice and compare

Describe a protective move, its history as you understand it, and its current relational cost. Offer quiet individual work, a supported conversation, or an observing role. Compare two possible responses without evaluating people as right or wrong.

20-25 min | Reflect on meaning

How can understanding the function coexist with changing the impact? Ask what fit, what did not fit, and how culture, power, disability access, or external conditions affect the options.

25-30 min | Integrate and close

Invite one optional next step or support request. Orient to the current setting, allow an unfinished question to remain unfinished, and agree how to revisit it. End early or adapt if activation increases.

Adaptations

For a group, use fiction and no compulsory round-robin disclosure. For remote use, allow off-camera reflection and private notes. For brief use, keep one example and one question while retaining opening and closing choices.

Reflection

What adaptation or follow-up is needed?

Scope and adaptation

Joint exercises require private safety assessment, voluntary participation, and appropriate EFT training. Do not invite joint vulnerability, enactments, or disclosure where coercion, violence, fear, or retaliation may be present. Use individual support and appropriate referrals instead. This collection concerns attachment-based Emotionally Focused Therapy, not tapping or Emotional Freedom Techniques.
