Scaling in Your Own Words - Review journal

Review an attempt at scaling in your own words and choose what to keep, change, or leave aside.

Adults; supported use as appropriate | 10 minutes

Fictional example: Devin rates readiness as four and explains what makes it more than one.

Use an ordinary or fictional example, with a clinician when appropriate. A scale is a conversation aid rather than a validated score.

Practice task

Define both ends of a personal scale, choose a current position, and describe what supports it.

1. What I tried, or what happened in the fictional example:

2. What I noticed before, during, and after; what remains uncertain:

3. What helped, did not help, or was outside my control:

4. What does your chosen number mean in everyday behavior? My optional adjustment or support request:

Scope and adaptation

Acknowledge distress and structural barriers before asking about change. Do not use exceptions or compliments to dismiss harm. A personal scale is a conversational aid, not a validated outcome measure, risk screen, or reason to withhold assessment.
