Half-Step Forward - Clinician dialogue

Guide a collaborative conversation about half-step forward while checking fit and participant choice.

Mental health professionals | 15 minutes

Fictional example: Devin would like to open the task list without completing it all.

Invite and obtain permission

Offer: "Would it be useful to explore half-step forward using an ordinary or fictional example? We can adapt it, observe, or stop." Ask what the person wants from the conversation.

Elicit before teaching

Ask: "How does this show up, if at all, in your own words?" Offer this idea tentatively: Small progress can be defined without pressure for dramatic change. Ask what fits and what does not.

Guide the task

Describe a half-step improvement and one sign another person might notice if you chose to tell them. Ask for permission before giving an example. Use this fictional illustration if useful: Devin would like to open the task list without completing it all.

Reflect and check accuracy

Reflect only what was offered: "I heard you describe ___. What did I miss?" Ask: What is a small enough step to be credible? Avoid assigning motives or interpreting silence as agreement.

Respond to a mismatch

If the person rejects the frame, say: "Thank you for correcting it. What would be more useful?" Return to their language or choose a different approach.

Close with agency

Ask which observation, question, or support request the person wants to keep. Confirm a manageable ending and appropriate follow-up; do not turn a tentative possibility into a homework obligation.

Reflection

What would tell me to adapt, stop, or seek supervision?

Scope and adaptation

Acknowledge distress and structural barriers before asking about change. Do not use exceptions or compliments to dismiss harm. A personal scale is a conversational aid, not a validated outcome measure, risk screen, or reason to withhold assessment.
