Problem-Solving One Barrier - Clinician dialogue

Guide a collaborative conversation about problem-solving one barrier while checking fit and participant choice.

Mental health professionals | 15 minutes

Fictional example: Casey wants to attend a group but finds the route confusing.

Invite and obtain permission

Offer: "Would it be useful to explore problem-solving one barrier using an ordinary or fictional example? We can adapt it, observe, or stop." Ask what the person wants from the conversation.

Elicit before teaching

Ask: "How does this show up, if at all, in your own words?" Offer this idea tentatively: Structured problem-solving can turn a broad difficulty into a workable task. Ask what fits and what does not.

Guide the task

Define one barrier, list options, compare access and consequences, and choose a small trial. Ask for permission before giving an example. Use this fictional illustration if useful: Casey wants to attend a group but finds the route confusing.

Reflect and check accuracy

Reflect only what was offered: "I heard you describe ___. What did I miss?" Ask: Which option is both useful and available? Avoid assigning motives or interpreting silence as agreement.

Respond to a mismatch

If the person rejects the frame, say: "Thank you for correcting it. What would be more useful?" Return to their language or choose a different approach.

Close with agency

Ask which observation, question, or support request the person wants to keep. Confirm a manageable ending and appropriate follow-up; do not turn a tentative possibility into a homework obligation.

Reflection

What would tell me to adapt, stop, or seek supervision?

Scope and adaptation

Original IMR-informed companion exercises, not the official IMR manual, fidelity assessment, or complete IMR program. Use collaborative clinical assessment and existing care plans. Do not change medication independently, challenge distressing beliefs through confrontation, or use worksheets to determine urgency. Increased or concerning symptoms need appropriate clinical assessment.
