Fictional example: Noah chooses to charge a device outside the bedroom.

The idea

Device settings can support a chosen plan but do not replace care or consent.

An ordinary example

Noah chooses to charge a device outside the bedroom.

What this can look like

Compare optional notification changes, device placement, or self-chosen access limits; exclude another person's coercive monitoring.

Check the fit

Which adjustment supports your choice without creating a surveillance arrangement? You may disagree with the framing, use fiction, or decide that this approach is not useful today.

A useful distinction

A chosen change goal and a clinical diagnosis are different questions. Address functioning, control, consent, values, and distress without assuming that sexual expression itself is pathological.

Reflection

Which adjustment supports your choice without creating a surveillance arrangement?

Scope and adaptation

Adult-only, non-explicit educational resources. The searchable phrase pornography addiction is not used here as an established diagnosis. Frequency, high desire, or moral distress alone does not establish a disorder; assess impaired control, functioning, distress, consent, and context with a qualified clinician. Respect consensual sexuality and chosen goals; no explicit media, aversion exercises, forced disclosure, or coercive monitoring.
