Medication Conversation Prep - Review journal

Review an attempt at medication conversation prep and choose what to keep, change, or leave aside.

Adults; supported use as appropriate | 10 minutes

Fictional example: Jordan wants to discuss available medication support for recovery.

Use an ordinary or fictional example, with a clinician when appropriate. Medication decisions belong in collaborative care with a qualified prescriber.

Practice task

List questions about treatment options, access, side effects, and follow-up without changing medication independently.

1. What I tried, or what happened in the fictional example:

2. What I noticed before, during, and after; what remains uncertain:

3. What helped, did not help, or was outside my control:

4. Which questions would help you make an informed decision with your prescriber? My optional adjustment or support request:

Scope and adaptation

Adapt to individualized assessment and the person's chosen recovery goals. Worksheets do not manage intoxication, overdose, or withdrawal. Abrupt cessation of alcohol or benzodiazepines can be dangerous: seek medical guidance rather than using a worksheet to stop or taper. Follow existing emergency and overdose-prevention plans; medication choices belong with qualified prescribers.
