Co-occurring Concerns Bridge - Clinician dialogue

Guide a collaborative conversation about co-occurring concerns bridge while checking fit and participant choice.

Mental health professionals | 15 minutes

Fictional example: Jordan notices that low mood and urges sometimes rise together.

Invite and obtain permission

Offer: "Would it be useful to explore co-occurring concerns bridge using an ordinary or fictional example? We can adapt it, observe, or stop." Ask what the person wants from the conversation.

Elicit before teaching

Ask: "How does this show up, if at all, in your own words?" Offer this idea tentatively: Mental health and substance-use concerns can be discussed together. Ask what fits and what does not.

Guide the task

Prepare a shared-care summary of concerns, goals, current supports, and questions without assigning a diagnosis. Ask for permission before giving an example. Use this fictional illustration if useful: Jordan notices that low mood and urges sometimes rise together.

Reflect and check accuracy

Reflect only what was offered: "I heard you describe ___. What did I miss?" Ask: What would you like your providers to understand about the connection? Avoid assigning motives or interpreting silence as agreement.

Respond to a mismatch

If the person rejects the frame, say: "Thank you for correcting it. What would be more useful?" Return to their language or choose a different approach.

Close with agency

Ask which observation, question, or support request the person wants to keep. Confirm a manageable ending and appropriate follow-up; do not turn a tentative possibility into a homework obligation.

Reflection

What would tell me to adapt, stop, or seek supervision?

Scope and adaptation

Adapt to individualized assessment and the person's chosen recovery goals. Worksheets do not manage intoxication, overdose, or withdrawal. Abrupt cessation of alcohol or benzodiazepines can be dangerous: seek medical guidance rather than using a worksheet to stop or taper. Follow existing emergency and overdose-prevention plans; medication choices belong with qualified prescribers.
