Medication Conversation Prep - Practice worksheet

List questions about treatment options, access, side effects, and follow-up without changing medication independently.

Adults; supported use as appropriate | 15 minutes

Fictional example: Jordan wants to discuss available medication support for recovery.

Use an ordinary or fictional example, with a clinician when appropriate. Medication decisions belong in collaborative care with a qualified prescriber.

Practice task

List questions about treatment options, access, side effects, and follow-up without changing medication independently.

1. My chosen or fictional situation, and what I know about it:

2. My response to the practice task above:

3. Which questions would help you make an informed decision with your prescriber?

4. An optional next step, support, adaptation, or reason to stop:

Scope and adaptation

Adapt to individualized assessment and the person's chosen recovery goals. Worksheets do not manage intoxication, overdose, or withdrawal. Abrupt cessation of alcohol or benzodiazepines can be dangerous: seek medical guidance rather than using a worksheet to stop or taper. Follow existing emergency and overdose-prevention plans; medication choices belong with qualified prescribers.
