A Choice Point Map - Clinician dialogue

Guide a collaborative conversation about a choice point map while checking fit and participant choice.

Mental health professionals | 15 minutes

Fictional example: Avery notices avoidance of an ordinary conversation and considers a brief honest message.

Invite and obtain permission

Offer: "Would it be useful to explore a choice point map using an ordinary or fictional example? We can adapt it, observe, or stop." Ask what the person wants from the conversation.

Elicit before teaching

Ask: "How does this show up, if at all, in your own words?" Offer this idea tentatively: A choice can be examined for its likely direction without moral scoring. Ask what fits and what does not.

Guide the task

Map a difficult situation, familiar responses, and a small action that moves toward a chosen quality. Ask for permission before giving an example. Use this fictional illustration if useful: Avery notices avoidance of an ordinary conversation and considers a brief honest message.

Reflect and check accuracy

Reflect only what was offered: "I heard you describe ___. What did I miss?" Ask: Which action moves in the direction you choose? Avoid assigning motives or interpreting silence as agreement.

Respond to a mismatch

If the person rejects the frame, say: "Thank you for correcting it. What would be more useful?" Return to their language or choose a different approach.

Close with agency

Ask which observation, question, or support request the person wants to keep. Confirm a manageable ending and appropriate follow-up; do not turn a tentative possibility into a homework obligation.

Reflection

What would tell me to adapt, stop, or seek supervision?

Scope and adaptation

Values are personally chosen directions, not moral rankings or evidence of worth. Recognize structural barriers, disability access, and culturally varied meanings. Do not turn willingness into exposure to danger, excuse coercion, or prescribe one life path. These original exercises do not constitute a complete ACT protocol.
